Maximum Marks	2 Marks

Customer Problem Statement Template:

Based on the project title "AI-Enabled Student Admissions & Support Management System using Salesforce Agentforce," I have drafted two distinct Customer Problem Statements (PS) that fit your template.

These focus on the two main "customers" of such a system: the Prospective Student and the Admissions Staff.

Customer Problem Statement 1 (PS-1)

Target: The Prospective Student

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A high school senior or graduate applying for university.	Get real-time answers to specific admission requirements and track my application status.	I face long wait times for email responses and find the university website's static FAQ section confusing and unhelpful.	The current manual support system cannot handle the high volume of inquiries during the peak admission season.	Frustrated and neglected, leading me to consider other institutions that offer better support.
PS-2	An admissions	Provide high-quality,	80% of my workday is	There is no autonomous	Burned out and unproductive, as I

	staff member responsible for reviewing thousands of student applications and providing support.	personalized guidance to qualified applicants and process enrollments efficiently.	consumed by answering the same repetitive questions about fees, dates, and basic requirements.	AI agent (like Salesforce Agentforce) to resolve routine queries without human intervention.	cannot focus on complex student cases that actually require my expertise.
--	---	--	--	--	---

To build an **AI-Enabled Student Admissions & Support Management System** using Salesforce

Agentforce, we must first anchor the technical solution in the real-world friction felt by

student and staff.
