

Project Design Phase-I Solution Architecture

Date	15 March 2026
Team ID	PNT2022TMIDxxxxxx
Project Name	AI-Enabled Student Admissions & Support Management System using Salesforce Agentforce
Maximum Marks	4 Marks

Solution Architecture:

This image outlines the **Agentic AI Architecture**, which defines how an autonomous system reasons and interacts with an environment.

It is broken down into three functional layers:

Perception Layer (Monitor): The "senses." It collects data and identifies triggers from the external environment.

Cognitive Layer (AI Model): The "brain." It Analyses the problem to understand intent and Plans a multi-step solution.

Execution Layer (Executes): The "hands." It carries out the planned workflow by taking a specific Action (like updating a record or sending an email) back into the environment.

The Core Concept: Unlike a standard chatbot that just talks, this architecture creates a feedback loop where the agent perceives a change, thinks about it, acts, and then monitors the results to see if the goal was achieved.

Example - Solution Architecture Diagram:
